

Pritt adhesive tape with practical easy-start feature

No more fiddly end finding!

Which of us has never had the problem of losing the end on a roll of adhesive tape? You scratch around, waste time and wear down your fingernails. But now there is a brilliant solution: 'Pritt EasyStart', the smart adhesive tape roll with integrated end finder. The start of the film is always there ready for the next pull, putting an end to those annoying, fiddly moments.

Whether in university or at school, in the office or at home, high-quality adhesive tape should always be to hand. And now, that perennial problem of not being able to find the beginning has an end. With 'EasyStart', Pritt has developed a special new type of adhesive taping tool. The quality film is particularly easy to unwind and – thanks to the serrated edge of the EasyStart feature – always ready for use.

The innovative adhesive tape roll with its integral aid and practical grip for easy handling means no more refilling of conventional dispensers. Pritt EasyStart adhesive tape comes in two grades: 'Crystal Clear' and 'Invisible'. The Crystal Clear version is ideal for home, school, university and office use. It offers outstanding transparency plus excellent adhesive properties and tear resistance.

The Invisible version is ideal for office applications. The film is imperceptible on white paper, can be written on and can also be copied shadow-free. Both adhesive tape grades offer high aging resistance, exhibit a particularly easy and quiet unwinding action and measure 25m in length and 19mm in width.
