Large-scale virtual power purchase agreement to cover 100 percent of Henkel’s electricity demand in the US

**Henkel accelerates climate action and renewable energy usage**

Düsseldorf – On the way to becoming a climate-positive company, Henkel has signed a large-scale virtual power purchase agreement (VPPA) relating to a new wind farm in Bee County, Texas. The agreed capacity equals 100 percent of the electricity demand of Henkel’s operations in the US, which comprise more than 30 production sites across the country. The long-term commitment contributes to increasing the share of renewable energy in the grid and supports Henkel to reach its climate protection targets, which were approved by the “Science Based Targets initiative” earlier this year.

In order to reach its goal to source 100 percent renewable electricity for its production sites by 2030, Henkel follows a combination of on-site production of green energy, direct purchase, and virtual coverage. This involves, for example, entering into long-term VPPAs that feed power from specific renewable energy plants into the supply grid – in an amount that is equal to the amount consumed. Thus, Henkel contributes to creating additional renewable energy generation capacity by way of its green power purchase.

**Innovative approach to sourcing sustainable electricity**

“At Henkel, we want to make a positive contribution to climate protection and further accelerate our efforts. Based on our strong achievements, we have reaffirmed our commitment to become climate-positive by 2040. The power purchase agreement demonstrates how we can drive tangible progress towards achieving our ambitious targets,” explained Sylvie Nicol, Member of the Henkel Management Board responsible for Human Resources and Sustainability.

“We are proud of having entered into a large-scale VPPA in the US market, which marks a true milestone and significantly strengthens Henkel’s contribution to climate protection.
Thanks to the excellent collaboration of our Purchasing and Finance teams we demonstrated our ability of taking innovative approaches to sourcing sustainable energy. For us, this is both an achievement and a motivation to evaluate further potential of such concepts as contribution to our sustainability agenda,” said Marco Swoboda, Chief Financial Officer at Henkel.

**New wind power project generating clean energy**

Henkel’s VPPA in the US is connected to a new wind power project, which is being developed by energy provider Ørsted. “In addition to generating clean energy, the wind farm will provide a significant source of new revenue for the local government, schools, and landowners,” said Philip Moore, Senior Vice President at Ørsted.

With an overall production of around 600,000 MWh per year, the wind farm is scheduled to be connected to the grid in early 2022. Henkel’s agreement comprises half of the wind farm’s electricity capacity at fixed terms over a period of more than 10 years. Henkel was advised on the VPPA by Schneider Electric Energy & Sustainability Services.

**Tangible progress towards targets for climate protection**

Increasing the purchase of electricity from renewable sources supports Henkel’s goals on the way to **becoming climate-positive by 2040**: The company plans to reduce the carbon footprint of its production by 65 percent by 2025 and 75 percent by 2030 from a 2010 base year. Henkel intends to achieve this by continuously improving its energy efficiency and by using electricity from renewable sources. By 2030, 100 percent of electricity shall come from renewable sources. By 2040, Henkel aims to have converted all remaining fossil fuels used in production to climate-neutral alternatives and supply surplus carbon-neutral energy to third parties. In addition, Henkel wants to leverage its brands and technologies to help customers, consumers and suppliers save 100 million tons of CO2 in a ten-year period up to 2025.

**Climate protection targets approved by “Science Based Targets initiative”**

As part of Henkel’s commitment to accelerate its contribution to climate protection, the company has defined science-based emission reduction targets. These were approved by the Science Based Targets initiative (SBTi) as consistent with levels required to meet the goals of the Paris Climate Agreement. The Science Based Targets initiative by CDP, the UN Global Compact, World Resources Institute and the World Wide Fund for Nature (WWF) defines and promotes best practice in science-based target setting and independently assesses companies’ targets.

About Henkel
Henkel operates globally with a well-balanced and diversified portfolio. The company holds leading positions with its three business units in both industrial and consumer businesses thanks to strong brands, innovations and technologies. Henkel Adhesive Technologies is the global leader in the adhesives market – across all industry segments worldwide. In its Laundry & Home Care and Beauty Care businesses, Henkel holds leading positions in many markets and categories around the world. Founded in 1876, Henkel looks back on more than 140 years of success. In 2019, Henkel reported sales of more than 20 billion euros and adjusted operating profit of more than 3.2 billion euros. Henkel employs more than 52,000 people globally – a passionate and highly diverse team, united by a strong company culture, a common purpose to create sustainable value, and shared values. As a recognized leader in sustainability, Henkel holds top positions in many international indices and rankings. Henkel’s preferred shares are listed in the German stock index DAX.
