

## Press Release

August 24, 2022

Adhesive Technologies business unit has invested into advanced production capacities to create value for its customers

### **Henkel Korea inaugurates Songdo Plant, delivering world class production capacity for electronics solutions**

Incheon, Korea – Henkel Korea has announced the completion of its state-of-the-art Songdo Plant within the Songdo High-tech Industrial Cluster in Incheon, which will become the Asia-Pacific production hub for high-impact electronics solutions of the Adhesive Technologies business unit.

A building dedication ceremony was held today in the presence of more than 160 guests, including Incheon City Mayor Jeong-bok Yoo, Chargé d’Affaires of German Embassy Peter Winkler, the Chairwoman of the Korean-German Chamber of Commerce and Industry Hyunnam Park, Executive Vice President Henkel Adhesive Technologies Jan-Dirk Auris, and President of Henkel Asia-Pacific Mark Dorn.

Henkel Korea signed a memorandum of understanding (MOU) with the Incheon Free Economic Zone Authority in April 2019 for the project and started construction work in the same year. With an investment of approximately 35 million Euros, this is the largest single investment in the company’s history in Korea.

With a total floor area of 10,144 square meters and in a two-story building, the Songdo Plant implements an advanced smart factory system (SFS), enhancing process monitoring, data collection and troubleshooting. After undergoing trial production and quality verification since last year, the plant began production in the second half 2022.

“The opening of our state-of-the-art Songdo plant is a milestone for our Adhesive Technologies business to further expand our capabilities to create value for our broad global

customer base in electronics with high-impact solutions for major industry trends such as connectivity and sustainability,” said Jan-Dirk Auris, Executive Vice President Henkel Adhesive Technologies. “In addition, the new facility demonstrates our ambition to further drive the implementation of Industry 4.0 across our production network while at the same time significantly reducing our environmental footprint.”

Henkel’s Songdo Plant has been designed for the production of adhesive solutions for semiconductor packaging, electronic components and device assembly. The high-performing and tailor-made products enable customers to develop advanced technologies for electric vehicles, electronic devices, and electronic materials as well as to increase sustainability by reducing CO<sub>2</sub> emissions during the entire lifecycle and by improving circularity.

The Songdo Plant aims to strengthen the relationship of Henkel Korea with key customers and to drive value creation for them. Thanks to the plant’s proximity to Incheon International Airport, goods can be shipped more quickly to local customers, providing additional benefits including longer product shelf life.

Mark Dorn, President of Henkel Asia-Pacific, commented, “With the completion of the Songdo Plant we see an opportunity for Henkel to meet the technological growth potential of the Asia-Pacific market, including Korea. In addition, the Songdo Plant will serve as one of Henkel’s global production hubs in electronics.”

The Songdo Plant has been designed with a smart factory system (SFS) and delivers world-class production capacity through its improved linkage between process inputs and product performance, which is achieved through an enhanced production analysis (Statistical Process Control: SPC).

The Songdo Plant has been designed as best-in-class manufacturing facility which meets the IATF (16949) and the ISO (9001) standards, as well as the “Class 10000 Clean Room” used in producing the highest-quality products. The plant incorporates a range of sustainability features that make it an eco-friendly production facility, including solar panels, a rainwater recycling system and energy-efficient equipment.

May Kim, President of Henkel Korea, expressed her gratitude with a message, “We are very proud about the investment and the new production capacities in Korea. The Songdo Plant will play a big role in accelerating the development of innovative electronics solutions.”

## About Henkel

Henkel operates globally with a well-balanced and diversified portfolio. The company holds leading positions with its three business units in both industrial and consumer businesses thanks to strong brands, innovations and technologies. Henkel Adhesive Technologies is the global leader in the adhesives market – across all industry segments worldwide. In its Laundry & Home Care and Beauty Care businesses, Henkel holds leading positions in many markets and categories around the world. Founded in 1876, Henkel looks back on more than 140 years of success. In 2021, Henkel reported sales of more than 20 billion euros. The company employs about 53,000 people globally – a passionate and highly diverse team, united by a strong company culture, a common purpose, and shared values. As a recognized leader in sustainability, Henkel holds top positions in many international indices and rankings. Henkel's preferred shares are listed in the German stock index DAX.
