Bouncing ball

from guar gum

Bouncing ball from guar gum

Guar gum is a plant-based thickening agent, also known as guar gum.
Guar gum can be used to make a bouncing ball. All you need is a liquid that contains small amounts of borates, for example contact lens solution.
Mix a small amount of contact lens solution with a little guar gum and knead the resulting mixture thoroughly. Shape it into a ball - done!

Please wash your hands thoroughly afterwards!
