Loctite Liofol LA 7837/LA 6265 sets new standards in flexible packaging

### **Henkel launches solvent-free adhesive system for safe and sustainable high-performance packaging**

Düsseldorf – Henkel Adhesive Technologies is launching Loctite Liofol LA 7837/LA 6265, a solvent-free, aliphatic adhesive system that is tailored for applications involving high thermal stresses – in particular retort packaging for pet food, for example. The system combines the highest level of food safety with reliable processing and also helps to reduce CO<sub>2</sub> emissions by lowering material consumption and eliminating the need for an energy-intensive drying step, which is required for products containing solvents.

The new technology has been specifically developed to offer high-end performance for demanding applications such as retort packaging – in a solvent-free format that surpasses solvent-based solutions in terms of sustainability and efficiency. Loctite Liofol LA 7837/LA 6265 is ideal for PET/Alu/CPP packaging as well as modern polyolefin structures.

#### **Taking packaging safety to a new level**

With an ultra low monomer content (< 0.1 percent), the complete absence of epoxy silane and a high temperature resistance of up to 134 degrees Celsius, Loctite Liofol LA 7837/LA 6265 fulfills the strict requirements of global brands. Its low application weight enables higher production efficiency. In addition, the energy-intensive drying step is rendered obsolete due to the system being solvent-free. It can also be cured at room temperature, which helps to actively reduce material and energy consumption.

“With Loctite Liofol LA 7837/LA 6265, we are further expanding our high-performance adhesive portfolio for retort applications, offering a solvent-free solution that provides both outstanding performance and increased sustainability. Through this innovation, we are enabling our customers to fulfill current market requirements, reduce CO<sub>2</sub> emissions and benefit from economic advantages due to higher production efficiency,” says Cagri Turkmen, Market Strategy Manager Flexible Packaging at Henkel.

## High performance without solvents

The system is focused on safe processing even at high machine speeds and under varying conditions – a crucial advantage for internationally standardized packaging processes. Transitioning to a solvent-free system is hassle-free thanks to its high processing stability and compatibility with conventional laminating machines. Loctite Liofol LA 7837/LA 6265 is not only suitable for retort packaging in the pet food industry, but also for ready meals, microwave products and pharmaceutical packaging.

With its new adhesive system Loctite Liofol LA 7837/LA 6265, Henkel is offering a reliable solution for today's requirements – and also laying the foundation for future adjustments to be made for new packaging concepts.

## About Henkel

With its brands, innovations and technologies, Henkel holds leading market positions worldwide in the industrial and consumer businesses. The business unit Adhesive Technologies is the global leader in the market for adhesives, sealants and functional coatings. With Consumer Brands, the company holds leading positions especially in laundry & home care and hair in many markets and categories around the world. The company's three strongest brands are Loctite, Persil and Schwarzkopf. In fiscal 2024, Henkel reported sales of more than 21.6 billion euros and adjusted operating profit of around 3.1 billion euros. Henkel's preferred shares are listed in the German stock index DAX. Sustainability has a long tradition at Henkel, and the company has a clear sustainability strategy with specific targets. Henkel was founded in 1876 and today employs a diverse team of about 47,000 people worldwide – united by a strong corporate culture, shared values and a common purpose: "Pioneers at heart for the good of generations."
